IMPORTANT INSTRUCTIONS
FOR FRESH WATER PLEASE READ!

This product works equally well in both fresh and salt water. You may have seen a picture or display of a unit in salt water producing large numbers of visible bubbles. KeepAlive, operating in salt water, provides a much more dramatic VISUAL display than fresh water.

To ensure that your Infusor is operating properly, LISTEN for the sound of air at the Air Control Valve.

IN FRESH WATER, the Infusor produces many sizes of bubbles. The larger bubbles, although highly visible, do very little in oxygenating the water. They rise too quickly. The Infusor produces millions of dust size bubbles that remains suspended in the water longer and are virtually invisible to the naked eye, unless you place a strong light on the water and observe from the side, as in an aquarium.
